REAL LEARNING BEHAVIOR

Learning Systems VS Real Learning Behavior

Introducing

StudyPulse

Design Thinking for Creative Problem Solving
Prof. Kristine Mudd

Team 6 – The Ideation Lab

Krishnanand Varshney | Prathamesh Adarkar | Arthad Sharma

The Reality of Learning Today

Students use multiple platforms to learn.

Courses, videos, notes, and resources are spread across many places.

Learning is fragmented.

No single system gives a complete view of what and how students learn.

Each platform has its own structure.

Different pacing, reminders, tracking methods and expectations.

This creates friction and inconsistency.

Hard to stay on track, easy to lose motivation.

Learning is not centralized — it is scattered.

Students juggle multiple platforms. StudyPulse brings **clarity, connection, and consistency.**

What We Learned from Research

We studied literature on learning behavior, digital learning systems and motivation to understand the gap.

1. Learning speed and cognitive energy vary across individuals.

People learn best at different times and in different ways.

2. Digital platforms assume consistency and linear progression.

Most systems expect fixed pace and regularity.

3. Visible metrics (deadlines, progress, streaks) influence behavior and motivation.

They can motivate, but also create pressure and anxiety.

4. Educational systems measure completion more than understanding.

Focus is on finishing tasks, not building real mastery.

5. There is a gap between how humans learn and how systems are designed.

This creates friction, distraction and drop-offs.

Human Learning vs System Design

HUMAN LEARNING

Flexible • Non-linear • Contextual
Personal • Evolving

SYSTEM DESIGN

Linear • Rigid • One-size-fits-all
Standardized • Fixed

VS

“

The core tension is clear:
**Humans learn in complex, variable ways,
but systems are built for standardization.**

What We Heard from Users

We conducted in-depth interviews with **9 students** and young professionals to understand their real learning experiences.

9 Participants

Middle school, high school, college students and young professionals.

In-depth Conversations

Explored habits, motivators, challenges and platform usage.

Open-ended Questions

Encouraged honest responses and real stories.

Real Insights

Patterns emerged around inconsistency, pressure and life getting in the way.

“

“I don’t stop because I don’t want to study...
I just get busy.”

– College Student

“

When deadlines come close,
I just try to finish.

– High School Student

**The problem is not motivation —
it is real life.**

Patterns We Observed

01

Deadlines push
learners into
survival mode

02

Progress metrics
create
anxiety

03

Learning speed
varies across
individuals

04

Real-world
context
increases
engagement

05

Systems measure
completion, not
understanding

Unmet Need

Students struggle to maintain consistent learning habits because learning systems **do not adapt** to their schedules, energy levels, and real-life context

StudyPulse

A context-aware learning system designed to build **consistent learning habits**

Our Value Proposition

It is a...

A learning platform

Designed for...

Students (middle school, high school, early learners)

In order to...

Build consistent learning habits

This will be
valuable because...

It aligns learning with real-life behavior instead of rigid systems

! The Problem Today

Students learn across multiple platforms:

👉 Learning is fragmented

✓ What StudyPulse Does

-  Integrates all learning into one place
-  Tracks behavior across platforms
-  Creates a unified learning experience

👉 From fragmented learning → consistent learning

How StudyPulse Works

- 1 Integrates courses from multiple platforms

- 2 Tracks user learning behavior

- 3 Identifies patterns (time, consistency)

- 4 Sends context-aware reminders

Learning Journey

Learners start with intent

Lose consistency due to real-life factors

Re-engage through contextual reminders

Build long-term habits

Key Assumptions

Will users respond to personalized reminders?

Does timing influence engagement?

Can this reduce inconsistency?

Will users understand the system?

🌟 Smarter than generic reminders

Build real study habits, not just streaks.

StudyPulse uses context-based reminders timed to when you actually study — not random push notifications. Designed for middle & high school students ages 11–18.

[Start Learning Free](#) →

[See how it works](#) →

✓ Free for students ✓ No credit card ✓ Works with Gmail & Apple

Why StudyPulse is different

Unlike Coursera and other platforms that send generic "come back" emails, we understand when and how you learn.

Context-Based Timing

We learn your study schedule and send reminders at the exact time you usually study — not at random.

Behavior-Aware Nudges

Reminders include your streak, progress, and next lesson — so you know exactly where to pick up.

Habit Formation Science

Built on proven habit loops: cue → routine → reward. We help you cross the 21-day threshold.

How We Tested

6 participants

(middle, high school, early college)

In-person usability testing

One-on-one sessions in a quiet environment

Think-aloud method

Participants verbalized their thoughts while using the prototype

Tasks

1

Sign up

2

Choose course

3

Start lesson

4

React to reminder

Participants:

6 students from

Middle School

High School

Early College

Key Learnings

Context-aware reminders felt personal and useful

Students liked that reminders felt relevant to their habits.

Timing matters more than frequency

The right time to remind had a bigger impact than how often we reminded.

Progress tracking can create pressure

Some students felt anxious seeing incomplete lessons or streaks.

The real problem is life constraints, not motivation

Busy schedules, schoolwork, and unexpected events were the biggest barriers.

“

'It's not that I don't want to study, it's just that life gets in the way.'

– Participant

What We Changed

Smarter reminder timing (adaptive + adjustable)

Reminders now adapt to study patterns and can be customized by the user.

Reduced pressure in progress tracking

Focus on progress, not perfection. No more guilt or streak pressure.

Added explanation for reminder logic

Users now understand why and when they receive reminders.

Improved user clarity and experience

Cleaner UI, clearer language, and smoother flows.

BEFORE (v1)

Reminder at 4:05 PM
Time to study!

Got it

7-Day Streak

M

Functions & Parameters
22 min Lesson 5 of 20

Continue Lesson

25% complete

What you'll learn

- Define functions
- Use parameters
- Return values

Final Prototype

Prototype v2

- ✓ Cross-platform integration
- ✓ Unified learning dashboard
- ✓ Context-aware reminders
- ✓ Personalized learning timing
- ✓ Reduced anxiety UI

What Makes Us Different

Traditional Systems

Platform-specific learning

Siloed experience across different platforms

Generic reminders

Same reminders for everyone, every time

Fixed schedules

Rigid timing that doesn't adapt to you

Performance-driven

Focus on streaks, scores, and completion

VS

StudyPulse

Cross-platform integration

Learn from multiple platforms in one place

Context-aware reminders

Smart nudges based on your habits and timing

Personalized learning timing

Adaptive schedules that fit your life

Behavior-driven personalization

Understand your patterns, support your growth

What We Learned

Generic reminders are ignored

✓ Validated

Students rarely engaged with one-size-fits-all notifications.

Timing significantly impacts engagement

✓ Strongly validated

Context-aware timing led to higher open rates and better response.

Reduced pressure improves experience

○ Partially validated

Students appreciated the change, but some still want more structure.

“The reminder felt like it understood me, not just another notification.”

– Participant

Where This Can Go

AI-driven adaptive learning systems

Smarter personalization that adapts to each learner in real time.

Integration with calendars and daily routines

Seamless fit into real life, not the other way around.

Emotion-aware learning experiences

Understanding how you feel to support how you learn.

Systems designed around human behavior

From motivation to habits—built for real people, not ideal ones.

AI Insight

You learn best in the evenings.

Calendar Sync

Study sessions sync automatically.

Emotion Check-in

How are you feeling today?

Smarter. More Human. More Impact.

StudyPulse isn't just about reminders — it's about building lifelong learning habits through technology that understands you.

Smarter AI

Deeper Integrations

Emotional Intelligence

Behavior-Centered Design

Key Takeaway

Learning systems shouldn't just track progress — they should adapt to how people actually learn.

StudyPulse
